GLARE

GLOBAL LAUNDRY AND
RENTAL EMISSIONS PLATFORM

The Global Laundry and Rental Emissions (GLARE) Platform is available to all TSA laundry members free of charge and is a tool designed to measure carbon emissions in Scopes 1, 2 & 3 in a standardised and consistent method.

One of the most effective ways to become more sustainable is to measure and reduce the greenhouse gas emissions emitted by your organisation.

GLARE allows members to calculate their footprint using emissions factor calculations that adhere to the Greenhouse Gas Protocol's Corporate Accounting and Reporting Standard.

HOW IT IS BESPOKE TO OUR INDUSTRY

Since the launch of GLARE in January 2025, the platform has been improved further with more emission factors bespoke to the laundry industry, especially around textiles. The platform will become more bespoke with time as we work with the industry to gather further information.

The platform has been developed with both large and small laundries in mind, with an aim to be user friendly that can be used as your primary or secondary carbon emissions platform.

HOW TO START USING GLARE

- Register business
- Register users
- Add usage data
- Generate reports

HOW TO REGISTER

Scan the QR code below and complete the **GLARE Registration Questionnaire** so that we can set up your organisation.

Following completion of the questions, you will be registered on to the GLARE Platform and you will then receive an email inviting you to set up your sites.

If you have any questions or for further information, please contact the team
